This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

The Native Materia Medica of Patna.

In making investigations as to the nature and properties of the Native medicines most in repute at Patna, great labour and much disappointment had to be undergone. A very great number of substances that were brought forward were absolutely inert and useless.

Materia Medica comprises chiefly the study of remedies, their natural character, their sensible qualities, their effects upon the living system, the theory of their action, and their application to the treatment of morbid affections; forming so many subjects of description or investigation. Divided into such branches is Materia Medica studied in all the schools of civilized countries. In Patna, however, as in other parts of India, the Materia Medica of the Native practitioners is formed on empiricism, superstition, and licentiousness. The result of the empiricism is the general and successful application of very numerous simple remedies; the results of the superstition and licentiousness are frequent death; and in very constant and numerous instances premature loss of virility. The Natives unacquainted with Chemistry never consider the medicinal powers of natural bodies as connected with that science. From this they loose the great advantage of being able to extract the peculiar principles constituting the efficiency of many bulky and inconvenient substances. The same ignorance also entirely precludes that proper combination in prescriptions by which the proper addition of one substance may modify or give increased activity to another.

In regard to the Materia Medica of Patna, the fact applies here as elsewhere, that many productions now imported are really indigenous; but, indolence and ignorance have prevented their discovery.

*

Digitized by Google

Here also, almost every wealthy inhabitant becomes impotent or in a state tending to that from excessive early dissipation, and as such, people will pay well for relief, a great number of substances are employed in a very preposterous manner with the view of benefitting in that way, hence a large part of the Patna Pharmacopœia, consists of substances employed for their supposed aphrodisial virtues.

Nearly all the articles of real efficacy used by the Natives are found in our own Pharmacopœia, such as gamboge, impure calomel, pure corrosive sublimate, arsenious acid, senna, cassia fistula, sulphur, mercury, opium, musk, castor, croton tiglium, rhubarb, turbeth root, jalap, impure potash and soda, the impure mineral acids, and several others.

The general nature of their prescriptions is ridiculous in regard to combination and quality of materials.

Such, however, as are the numerous substances sold by the punsaries or native apothecaries, still, though generally very cheap and easily procured, they are constantly adulterated, being under no regulation and liable to no investigation whatever; they are at liberty to injure the lieges of the Hon'ble Company, to a full extent, and especially the quantity of arsenic and other poisons sold is terrible to think of.

The latter evil might be greatly obviated by placing all the punsaries under certain proper restrictions; compelling such to bring a written list with small accompanying specimens, twice a year, to the Civil Surgeon for inspection; and levying a fine where the articles were not genuine; and by compelling punsaries to bring a written account of all the worst kinds of poisons sold, with the names and residences of the purchasers, once a month, to the Magistrate. At least, at Civil and Military stations, something of this kind might be effected.

I now subjoin the four hundred and eighty articles of any consequence as medicines, selected from the Patna Native apothecaries.

This account of the Patna Native Materia Medica was drawn up to accompany a box containing the 480 specimens of every article described, and carefully arranged for reference when desired.

Digitized by Google

In all cases the native opinion regarding the action and doses of these remedies has been entered. Some of the articles are ridiculous in application or nearly inert; while many are efficacious, and in the hands of the superior hukeems are applied in reference to qualities nearly in accordance with modern scientific views.

These articles were selected from the "punsaries'" shops at Patna, and, comprise all that possess any energy, per se, or implied efficacy by collateral influence of magic.

In relation to the general state of the native practice of physic, the higher Hindoo castes act the most wisely in rejecting interference altogether, and holding with Pliny, that "omnis morbus lethalis aut curabilis; in vitam desinit aut in mortem. Utroque igitur modo medicina inutilis; si lethalis, curari non potest; si curabilis, non requirit medicum; natura expellat;" and they live or die resigned and contented.

But by far the greater number of sick are a prey to native "mountebanks, empirics, quacksalvers or wizards, barbers, and old women."

Quibus loquacis affatim arrogantiæ est,
Peritiæ parum aut nihil!

The community having full faith in the Paracelsian adage, that relief depends not so much on remedial action as upon psychological imbuement through the medium of the preparer; so that with them

Hellebrorus curat; sed quod ab omni datus medico, vanum est!

The native surgery of Patna is at a still lower ebb than the native physic; and of both of the most numerous and inferior order of professors it may be truly said—

Chirurgus medico quo differt? scilicetisto,
Enecat *hic* succis; enecat *ille* manu.
